FLATTEMP (FLT)

BELT & FOIL TEMPERATURE MEASUREMENT

- Non-contact and precise temperature measurement in a temperature range from 10° to 300°C (50° to 572°F); 400°C (752°F) on request; at belts, foils and plane surfaces using the Convective Heat Flow principle (without optics). The temperature measurement on rolls and other cylindrical objects can be effected via adapters according to their radius.
- The measurement is independent of influencing factors like colour, emission, speed, material, surface structure and varying distances between sensor head and object.
- The double head design allows auto calibration of the system. The measurement system is maintenance-free.

1. SENSOR HEAD
